# Quality Production Before Production Even Begins.

To make great windows and doors, you need more than great people. You need a great place to work. And that's exactly what you'll find when you visit our advanced manufacturing facility. Skillfully designed by process managers who know how windows and entry doors should be made, every step in our manufacturing process is streamlined for maximum efficiency while allowing the opportunity for handcrafted detailing by an experienced production team. So, whether it is an order for five hundred windows or five entry doors, each and every customer is assured of quality-built, on-time orders manufactured with skill and care. Granted, there are larger manufacturers out there with even larger facilities that can make more products in a day than we can in a week. But to us, it's not about being the biggest. It's about being the best. After all, isn't that the way it should be?

**WINCORE**<sup>®</sup>  
WINDOWS & DOORS

Special thanks to *Window & Door* magazine for recognizing Wincore® Windows and Doors as one of their Top 100 Manufacturers for 2012.

We're Not  
Only Building  
Windows & Doors.

We're Building  
Hope.

Wincore is proud to support Tough Enough to Wear Pink™, a non-profit organization diligently working toward fundraising for breast cancer research. Which means every window and door we make helps bring us one step closer to a cure. Find out more at [www.wincorewindows.com](http://www.wincorewindows.com).

# Proud To Be Called An ENERGY STAR Partner

Today, many companies promise to make energy efficiency a priority. And when you see the ENERGY STAR symbol, you're guaranteed those promises are true. As an ENERGY STAR partner, under the guidance of the U.S. Environmental Protection Agency (EPA) and the Department of Energy (DOE), Wincore® has agreed to:

*Build energy-efficient products that have been tested and certified in accordance with the guidelines set forth by the ENERGY STAR Partnership program.*

*Manufacture each product with attention to increasing overall energy efficiency.*

*Inspire trust in the ENERGY STAR symbol through quality, high-performing products.*

Additional information about ENERGY STAR can be found at [energystar.gov](http://energystar.gov).

# Wincore® Entry Doors – Everything You Want And Then Some.

## Beauty

You never get a second chance to make a great first impression. That's why Wincore® Entry Systems are thoughtfully designed with enhanced details to greet your guests with classic elegance and style.

## Durability

At Wincore®, we pride in delivering entry systems that feature only top quality construction, made with the finest materials. Each and every one backed by our Lifetime Limited Transferable Warranty.

## Security

Your security and safety is one of our main concerns. That's why we chose to utilize only the most respected names in hardware like Schlage™ and W&F for all handlesets and locking mechanisms.

## Energy Efficiency

Today, energy efficiency is more important than ever. That's why Wincore® Entry Systems are ENERGY STAR qualified. Choosing ENERGY STAR products for your home helps save on heating and cooling costs year round, as well as providing you with a more comfortable living space and added appraisal value to your home.

## Decorative Glass

Exceptional quality decorative glass doorlites, sidelites and transoms take style and sophistication to a new level.

- Artistically designed patterns
- Assembled by skilled craftsmen
- Precise cutting, mitering and soldering
- Made with hand-made glass panels

Decorative glass achieves visual character through aesthetic imperfections that mimic hand-made sheet glass of centuries past – each exhibiting textural waves and striations, random seeds (air bubbles) and a variety of other natural effects.

Quality Construction

# Features

There are millions of reasons to choose Wincore® Entry Systems. Here are just a few to get you started.

## BEAUTIFUL FINISH

HAPS-free paints and stains are applied by highly-trained, skilled professionals in a climate-controlled environment. Wincore® doors are protected with a clear coat and oven-cured for maximum durability. This state-of-the-art application method ensures a beautiful, even finish.

## INSULATED CORE

Entry Systems feature an environmentally-friendly insulation that is 100% CFC-free to provide a high R-value for maximum thermal protection.

## IMPROVED DOOR FRAMES

Composite polyfiber frames will never absorb moisture or splinter. Wincore's® standard composite frame will not rot like their wood counterpart, nor will they rust like a steel framed door.

## ROT-FREE BRICKMOULD

A Wincore® standard, brickmould is constructed of a durable composite material to resist rot, decay and damage from insects. Customizable up to 4".

## SECURITY STRIKE PLATE

Where applicable, a steel security strike plate adds extra strength to help prevent forced entry.

## SECURE PROTECTION

Grade 1 is highest level of security for residential deadbolts.

## DUST BOX

The Dust Box, located beneath the deadbolt strike, provides a barrier to air infiltration and also conceals the deadbolt latch.

### BALL BEARING HINGES

Ball bearing hinges are standard for inswing doors – featuring four-point attachments to the door and the door frame for a lifetime of dependability. For certain applications (like French Doors), adjustable hinges are also available.

### ADVANCED SILL DESIGN

The sill's innovative design prevents rotting, warping or deterioration over time. The thermally broken sill includes a composite substrate and synthetic cap and nosing. Incorporating a high dam overlap cap in addition to the 1-3/8" sill height creates a tough barrier against water penetration. Door sills are available in mill finish, satin nickel and bronze.

### DOOR BOTTOM SWEEP

The double bulb sweep maintains maximum surface contact with the threshold rail, consistently outperforming competitive products by encapsulating both the outside and inside edges of the rail.

### WEATHERTIGHT SEAL

Energy efficient Q-Lon weather stripping provides a weathertight seal along the sides and top of the door frame and interlocks with the Simple Solution Corner Pad ensuring the most energy efficient seal available for keeping moisture, air and dirt out of your home.

### HARDWARE

Wincore's® standard hardware is manufactured by the most recognized name in entry door security, Schlage. Schlage hardware is durable, stylish and available in multiple finishes.

### DOORLITE FRAME

High-performance, doorlite frames are heat-resistant and will not warp, crack or fail to adhere to the door, even in most intense climates. Most decorative glass patterns utilize the TriSys frame which locks together to conceal fasteners used to attach the glass frame to the door, resulting in a seamless frame profile with a compression seal for weather protection. Our polypropylene doorlite frame also withstands the elements and can be finished to match the door.

### DOORLITES

Doorlites add beauty, natural light and curb appeal to your home, but can also answer your specific needs for light control, privacy and outdoor visibility. Handcrafted decorative glass is individually unique – no two are ever alike.

### CASING

Standard clear poplar 2-1/2" Ranch or Colonial style casing covers paint lines for a finished appearance. Casing is also available in Oak and 3-1/2" wide.

# Door Frames

## Innovative Frame Technology

Wincore® composite door frames are an innovative new alternative to traditional finger jointed wood door frames. Extensive research and development proves full-length composite door frames combine all the strength and convenience of wood door frames with enhanced properties that make them moisture- and insect-resistant. The composite rot-free polyfiber door frame will last years after your neighbors' wooden frames have deteriorated. Composite polyfiber frames will never absorb moisture, splinter or rot like wood door frames, or rust like metal door frames.

- *Low Maintenance*
- *Incredible strength, year after year*
- *Resistance to wear, splitting and impact*
- *Excellent nail and screw holding strength*
- *Great paint, stain and glue adhesion*
- *Can be installed below grade or direct to masonry*
- *Does not promote mold or mildew*
- *Moisture & Termite Proof material*
- *Lifetime warranty for rot, decay and insect damage*

Many manufacturers only use a few inches of composite material finger jointed to wood at the bottom of their frames, **Wincore® is proud to offer 100% full-length composite frames as a standard feature.** This durable frame technology **guarantees door frames for life against rot, decay or insect damage.** Exceptional finishing qualities and enhanced performance features ensure a lifetime of dependability.

WOOD FRAME

COMPOSITE FRAME

## Rot-Free Brickmould

Provides a beautiful transition from the frame of the entry door to the exterior of the home. Constructed of a durable composite material, this brickmould design resists rot, decay and damage from insects. Customizable up to 4" wide.

# Door Construction

## Patented HydroShield Technology™

Exclusive HydroShield Technology™ features fiberglass reinforced door skins, full-length composite stiles, and composite top and bottom rails to prevent water infiltration on all six sides.

## Full-Length Composite Top and Bottom Rails

Additional non-porous protection keeps water from seeping into the door and helps prevent the build up of mold or mildew.

## Fiberglass Reinforced Skin

Fiberglass is unmarred by the wear and tear of everyday use and is unaffected by moisture and humidity. The doors will not rot, splinter or warp like wood, and won't dent or delaminate like steel.

## Full Length Composite Stiles

All Wincore® fiberglass entry doors feature fully composite stiles to prevent water infiltration into the door's insulation and full length LVL to ensure the door will never warp, rot, or rust.

## Architecturally Correct Proportions

Beautifully detailed panels are identical to traditional wood door construction to create crisper shadow lines and heightened curb appeal.

## Insulated Core

Environmentally friendly insulation is 100% CFC-free and provides a high R-value for maximum thermal protection.

Wincore® 8-foot entry doors are reinforced with steel on the lock side for added strength and security.

Pre-mitered, ready-to-install casing is available for any door configuration including transoms. Comes in all paint and stain finishes.

# Craftsman Doors

Inspired by the design principles of American Craftsman architecture, the Craftsman Series doorlites add authenticity to a Craftsman, Mission, Bungalow or Cottage style home.

- Energy-efficient Low E glass.
- Decorative and SDL options.
- Glass size and frame profile are specific to the Craftsman series.

Each doorlite includes both clavos style plugs, which mimic the look of iron nailheads, and domed plugs – depending on the glass option selected.

## Dentil Shelf

For an authentic appearance, Craftsman style doors are available with an optional Dentil Shelf.

# Patio Doors

Patio Doors are available in a two panel or three panel door configuration. On two panel patio doors, one panel is operational (inswing only) while the other remains fixed. On three panel patio doors, two panels remain fixed while the remaining panel is fully operational (inswing only). A heavy duty top-hung aluminum screen frame (available in seven popular colors) with fiberglass mesh allows for virtually effortless ventilation. Patio doors are available with any of the decorative glass patterns that fit Full Lite door styles shown on the following pages.

15 Light Beveled Platinum Caming

Vista Prairie

# French Doors

All Wincore® Entry Door systems are available as French Double Doors. When ordered in this style, Entry Doors feature a color-matched astragal pre-assembled into the door frame. When locked using the durable steel lock pins at the head and sill of the unit, the astragal keeps one panel of the entry system locked in place, while allowing the other door panel to open and close. With the astragal unlocked, both door panels open and close freely.

## Easy Operation

On French Double Door Systems, Astragals are locked and unlocked with fingertip adjustments.

# Venting Sidelite

Form follows function in one beautiful package — a continuous sill with one or two hinged sidelites. Full, wide mullions add strength and stability where sidelites are opened. Full length composite capped LVL sidelite stiles provide additional strength where multi-point lock and hinges are anchored. Full screens with fiberglass mesh are easy to remove and are available in complementary colors. Inswing configurations only. Venting Sidelites are available with blinds, internal and external grids as well as decorative glass.

# Operating Sidelite

When a single door is too small and a double door is too big, choose an Operating Sidelite. Operating Sidelites function just like a traditional double door through the use of an easy-to-use, thermally-broken astragal that allows the sidelite to swing open. A hinged door and hinged sidelite become a single unit with a continuous sill. All styles of sidelites (Full Lite, 3/4 Lite and Half Lite) can become operational. Operating Sidelites are also available with blinds, internal and external grids as well as decorative glass.

Decorative Glass

Our Glass Options Are Like A Multiple Choice Question With No Wrong Answer.

Low E Glass

Rain Glass

QuickShip

### Low E Glass

**Performance glass option available on most products with or without internal grids.**

Low E is a high performance glass made with an invisible thin metallic coating that blocks heat flow. A proven energy saver, Low E glass reduces air conditioning costs by reducing solar transmissions in the summer. In winter, it reduces heat loss to the outside and allows solar energy to pass inside.

# Harmony Blinds

## Internal Grids & Blinds

Contoured grids and aluminum blinds are both placed between the panes of glass. Units are triple-glazed and available in white only. Exceeds ENERGY STAR thermal requirements\*. Reduces outside noise intrusion.\* Blinds are hidden when fully raised. Reduced travel operator. Single lever operation. Ten year warranty.

No More Dusting

\*Based on independent lab testing of U-factor and STC ratings. The U-Factor indicates the rate of heat loss of a door assembly. The lower the U-factor, the better the insulating value and the lower the heating bill. STC ratings indicate a building material's ability to reduce sound penetration; the higher the STC, the more effective the barrier against sound penetration.

Severe Weather Glass

# Severe Weather Decorative Glass

Powder-coated  
Aluminum  
Doorglass Frame

Laminated glass and an aluminum reinforced doorlite frame ensure that Wincore's® Severe Weather doorglass retains its integrity when confronted with unusually high winds and swirling debris. Laminated glass can also provide up to 30% reduction in outside noise infiltration when used in a properly sized and installed entry door system. Both the decorative and classic Severe Weather glass options are also utilized in Wincore's® impact-resistant entry doors.

- Glass Panel

## Painted Aluminum Frame/Clear Glass

- Laminated Glass
- Powder-coated Aluminum Frame

In addition to multiple decorative doorglass options that are certified for use in coastal areas, Wincore® also offers Severe Weather entry systems featuring traditional classic glass sandwiched around a clear, difficult-to-penetrate laminate layer. Customization is possible with multiple options including decorative grid systems and behind-the-glass blinds.

## Severe Weather Classic Glass Doors With Blinds

Blinds are located behind the glass and are controlled by a single operating lever. Blinds raise, lower and tilt.

## Severe Weather Classic Glass Doors With & Without Internal Grids

### Turtle Glass

Thousands of marine turtles nest in U.S. coastal areas. State and local ordinances protect hatchling turtles by limiting brightness of inside-to-outside visible light transmittance. Selected styles of Wincore® Severe Weather doors featuring classic glass can include tinted grey glass that meet these requirements.

Options

# Pet Doors

# Trilennium™ Multi-point Hardware

Standard on 8/0 Doors  
Optional on 6/8 & 7/0 Doors

Trilennium™ Multi-point hardware system provides more than just security. It offers homeowners better door closure and sealing than a single point lock. All three points latch and all three points deadbolt with a 1" throw. Deadbolts include anti-saw hardened steel pin. Includes 10-year warranty on finish, materials and workmanship.

## Peace of Mind

One solid unit with three latches based on the strength of patented I-Beam construction for reliable, proven performance.

## Security

Operating as one, all three latches engage when the door is closed. One movement of the thumbturn or key activates all three deadbolts. Activated, each latch is a deadbolt and cannot be compromised.

Three-Point  
Locking  
System

## Patented Strike Rollers

Patented strike rollers and latches draw the door into perfect alignment with the jamb for a tight seal with no deflection.

## Panic Release

A single downward turn of the lever releases all three deadbolts.
